(54) **Temple device for loom including automatic temple position switching mechanism and method of driving temple thereof**

(57) Provided is a method of driving a temple (41) of a temple device (40) including an automatic temple position switching mechanism (42), the temple device (40) being used for a loom that weaves a fabric (2a) having two or more weave sections with different weft densities, the automatic temple position switching mechanism (42) automatically switching a position of the temple (41) between two positions that are an operating position and a standby position, the method being performed when dis-

placing the temple (41) from the standby position toward the operating position in accordance with switching between the weave sections, the method including storing an operation mode related to movement of the temple (41) beforehand, and controlling the movement of the temple (41) in accordance with the stored operation mode in accordance with switching between the weave sections.
