(54) **Lock protection for a cylinder lock**

(57) The invention concerns a lock protection for a cylinder lock for a door. The lock protection has a first part (28) with a substantially cylindrical outer surface (36). The first part (28) is adapted to receive a lock cylinder (20, 22). The lock protection also has a second, substantially ring-shaped, part (46) with a substantially round second hole (48) which is adapted to said substan-

tially cylindrical outer surface (36) of the first part (28). The second part (46) can be moved to different positions along the substantially cylindrical outer surface (36) and can be locked in a selected position relative to the first part (28). The lock protection enables an adaptation to different lock/door constructions. The invention also concerns a use of the lock protection.
