(54) **Container structure for a fluid**

(57) A container structure (100) for fluids, of plastic material, comprises a side wall (10), a bottom wall (20) and a head wall (30), which defining a closed inner chamber (40) having an inner side wall (10a). In addition, the container (100) comprises at least one inlet/outlet mouth (31), for the movement of the liquid towards/away from the inner chamber (40) and differential pressure means for making a pressure (50, 70) in the inner chamber (40) with respect to the outside of the container. In particular, the mouth (31) allows, furthermore, te operations of loading/unloading the fluid into/away from said container. In particular, the inner chamber (40) comprises a plurality of stiffening ribs (41) obtained by variation of the thickness of side wall 10 and extend for a predetermined thickness with respect to the inner side wall (10a) del container. The stiffening ribs (41) are adapted to opposing the container to collapse when the differential pressure means for making a pressure (50, 70) make in the chamber (40) a pressure less than the external pressure to the container.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 10 16 2463

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
