(54) Improvements in water heating

(57) This invention provides an electric water heater (10) which comprises a linear array of heating modules (12, 14) each comprising an inlet, an outlet, and a heater element (34). The inlets and outlets of the modules are arranged such that, when they are placed adjacent one another in the array, the outlet of one module (12) is aligned with the inlet of the adjacent module (14). In use this enables water to flow through the modules (12, 14) in series. (Figure 1)

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 12 25 0011

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
