(54) **Methods of refolding mammalian glycosyltransferases**

(57) The present invention provides methods of re-folding mammalian glycosyltransferases that have been produced in bacterial cells, including glycosyltransferase mutants that have enhanced ability to be refolded, and methods to use such refolded glycosyltransferases. The

invention also provides methods of refolding more than one glycosyltransferase in a single vessel, methods to use such refolded glycosyltransferases, and reaction mixtures comprising the refolded glycosyltransferases.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 11 00 5681

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
