## (54) Arrangement and method for attaching a device into a planar surface structure

(57) The object of the invention is an arrangement and a method for fastening a device onto a planar surface structure, such as onto a wall. The invention is most preferably applicable for the fastening of a drying rack which is to be heated by electricity or by circulating water. In the solution according to the invention, an inner portion is used which is fastened on one hand onto a wall and on the other hand onto a fastening support of the drying rack. The drying rack with its inner portions is placed for a moment at a desired mounting spot, in which case the inner portions become attached and remain at their proper places by adhesive attachment. The inner portions can thereafter be fastened with screws onto the wall without the drying rack or a stencil. Finally, the drying rack is set at its place and fastened to the inner portions, in which case the screws which have been fastened into the wall get covered and are protected from splash water.
