(54) **Anti-tamper lock**

(57) There is described a lock cylinder comprising a housing having a first section, a second section and a connecting section therebetween such that a gap is provided between the first section and the second section, at a location adjacent the connecting section. A cam is rotatably mounted on the housing, the cam being moveable to a position in which the cam is located in the gap and is contained within the profile of the housing. The housing has a longitudinal passageway extending from the first section to the second section and which passes at least partly through the gap, the passageway being configured for receiving a strengthening element therethrough and the cam is configured for lost motion so that the cam is not required to enter the gap during operation of the lock.

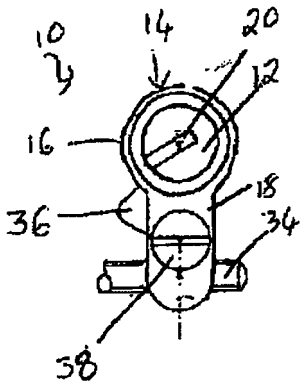

FIG. 4

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
