(54) **Device for guiding a piece of fabric**

(57) Device for guiding a fabric, especially designed to be used with retractable screens like for example pleated anti-mosquito screens, which includes two vertical rigid elements facing each other, one of them fixed (2) and the other one mobile (1) and the latter being able to slide from a starting position where it is in contact with the fixed element or near this fixed element, to a final position, moving farther away from the fixed element. The mechanism that allows opening the screen also includes the upper flexible element (4), which is connected to the fixed part (2) and an intermediate flexible element (5) that is in turn connected to a lower flexible element (6) that attaches to the fixed element (2). The mechanism is linear, which simplifies the assembling of the device. It also easily adapts to openings of different sizes, which are to be protected with the retractable screen.

FIG. 2

EUROPEAN SEARCH REPORT

Munich		28 July 2014	Weißbach, Mark
CATEGORY OF CITED DOCUMENTS			
X : particularly relevant if taken alone Y : particularly relevant if combined with another document of the same category A : technological background O : non-written disclosure P : intermediate document T : theory or principle underlying the invention E : earlier patent document, but published on, or after the filing date D : document cited in the application L : document cited for other reasons & : member of the same patent family, corresponding document			

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 11 38 2305

5

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
