(54) **Desk board raising apparatus**

(57) A desk board raising apparatus has a seat (10), an active module (20), a passive module (30) and a cylinder (40). The active module (20) is pivotally mounted in the seat (10) and has a base (21), two linking arms (22), and a pivot (23). The pivot (23) is deposited between the linking arms (22) and pivotally mounted in the seat (10). The passive module (30) has a passive board (31) pivotally connected with the linking arms (22). The cylinder (40) is adapted to push the passive board (31). The base (21) lifted up or down can drive the passive board (31) to move up or down. The desk board raising apparatus uses a simple structure to synchronize the movements of the passive board (31) and the base (21), and has the advantages of convenient operation, low manufacturing cost and low maintenance cost.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 12 18 4643

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
