(54) **Hinge with a checkarm**

(57) The subject matter invention relates to a hinge (1) with a checkarm having at least one fixed body (10) and at least one movable body (20) connected to each other by means of at least one joint (15) in order to connect a door (60) onto a vehicle body (50) in a rotatable manner, **characterized** in that, in order to limit opening extent of the door (60) to a predetermined angle with respect to the vehicle body (50) when intended, the present invention comprises a checkarm (30) connected to any of the fixed and movable bodies (10, 20) from one side by means of a joint (42) in a rotatable manner and on the other side thereof, having at least one lock member (32) retained by a gripping member (14) when the door is opened at said angle, where said gripping member (24) is assembled to the vehicle body or to any of the fixed and movable bodies (10, 20).

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
