(54) **Container of universal use for protecting and distributing food**

(57) The invention relates to the container of universal use for protecting and distributing food on large scale which is intended for disposal after use and which is characterized in that it has at least two adjacent chambers **(1,2)** connected with each other on the top separably by locating edges of the chambers **(1,2)** in lugs made in the lid **(3)** closing the container on the top, and at the bottom connected inseparably by gluing, welding or bending. In the lid **(3)** there are made closing holes **(4)** located over each of the chambers. The holes **(4)** are closed with a ripping cotter, they are finished with the outer roller closed up with a crown-cap or with the outer roller threaded externally, closed with a threaded internally cap. In another form of the invention the lid **(3)** closing the container on the top is divided into parts corresponding to the amount of chambers **(1,2)** and each part is provided with the pulling ring enabling removal of the lid **(3).** According to the invention the containers make it possible to store food separately in each of the chambers. It can be food of one kind or of different kinds. It also makes it possible to lengthen the period of storing food.
