### (54) Adjustable mounting arrangement for a window screening

(57) A screen assembly for a window comprising a screen supported by an elongate support member adapted to be mounted in an upper region of the window opening, a pair of mounting brackets being provided for attachment to respective sides of the window opening adjacent the top face of the window opening, each end of the elongate support member being provided with a recess adapted to receive a body portion of a respective mounting bracket such that the elongate support member

may be engaged over the mounting brackets to retain the support member between the sides of the window opening, a respective biasing means being associated with each recess and/or body portion acting to provide a biasing force to urge the respective mounting bracket away from the respective recess in the adjacent end of the elongate support member, such biasing forces acting to centralise the elongate support member within the window opening.
