(54) **Floating platform**

(57) The floating platform comprising at least two floating elements (2) linked by means of at least one fastening element (1), each floating element consisting of two lateral faces (3,4) with at least one vertical projection (5), and two lateral faces (6,7) with at least one vertical cavity (8) on each corresponding to the vertical projection; of a top face and a bottom face forming together a hollow body, wherein each vertical projection is configured with a constricted portion (15), extending to an expanded to the periphery portion of the corresponding lateral face thus forming a supporting surface (17), and each vertical cavity is configured with a constricted portion, extending to an expanded to the center portion of the corresponding floating element in the portion of the corresponding lateral face thus forming a supported surface,

wherein one of each floating element lateral faces comprising a vertical projection is provided with flanges (18,19) supporting each fastening element and placed on both sides of said vertical projection, the flanges being portions of the corresponding fastening elements mating parts, and the second of each floating element lateral faces comprising a vertical projection is provided with at least a projection surrounding the corresponding fastening element from above and placed on one sides of said vertical projection and with at least a projection supporting the corresponding fastening element and placed on the other side of said vertical projection, the projections being portions of the corresponding fastening elements mating parts.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 13 19 9643

5

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
