(54) **Refrigerator having a bottle rack**

(57) Disclosed is a refrigerator. The refrigerator includes a support plate (11) and at least one bottle rack (2, 3). Each bottle rack (2, 3) includes a receiving shell (21, 31) having a longitudinal groove (22, 32) for receiving a bottle and a support leg (23, 33) extending downwards from the receiving shell (21, 31) and supported on the support plate (11). As proposed by the present invention, at least one bottle rack (2, 3) includes an accommodating

space (25, 35) extending downwards from an upper surface (26, 36) of the receiving shell (21, 31) so as to receive a support leg (33, 23) of another bottle rack (3, 2) stacked on the at least one bottle rack (2, 3). Accordingly, at least two bottle racks can be stably stacked together to keep the bottle, which helps to reduce occupation of a usage space of the refrigerator by idle bottle racks.
