(54) **Racket**

(57) A racket (1) includes: a shaft (20); a frame (10) joined to a tip end side in a longitudinal direction of the shaft; and a handle (30) joined to a rear end side in the longitudinal direction of the shaft, wherein the frame is provided with a plurality of through holes (11) that penetrate from an inner peripheral surface (10a) to an outer peripheral surface (10b) for a string (40) to pass through, a through hole has a first angle formed between a width direction and a penetrating direction of the through hole

smaller than a second angle formed between the width direction and a normal direction to the inner peripheral surface in a position provided with the through hole, the through hole being for the string along the width direction orthogonal to the longitudinal direction on a hitting surface of the racket to pass through, the through hole being positioned to the tip end side in the longitudinal direction than a center of the frame.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 14 16 8889

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
