(54) **Screen device**

(57) The present invention relates to a screen device, comprising a supporting element (3) on an end side of the screen roller, a fixing body (4) with two guide elements (5), between which the supporting element (3) can slide in and out via a fitting opening (6) for guiding the supporting element (3) for installation thereof and a securing element (7) which during the sliding movement during the installation of the supporting element (3) is first moved towards its second position in which the supporting element (3) can slide in and out of the guide elements (5) and is then returned to its first position, in which the securing element (7) prevents the supporting element (3) from sliding out of the guide elements (5).
