(54) **Refrigerator**

(57) The invention is to provide a refrigerator in which dew condensation water can be prevented from dripping down a floor as water droplets even when sealing property for covering a clearance gap between vacuum heat insulating members is incomplete and thus the dew condensation water occurs.

The refrigerator is provided with a joining portion

formed by joining a plurality of plate members and is provided with a dew receiving portion below the location, in which the vacuum heat insulating member inside a main body is not arranged, as an accumulating portion for accumulating the dew condensation water occurring in the joining portion of the plate member.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 14 17 2233

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
