(30) Priority: **31.05.2013 DE 102013009129**

(54) **Improved abrasive device**

(57) Improved abrasive device for appliance of a rotating, abrasive surface, having an upper hub wheel 10 and a lower hub wheel, which are arranged within each other, wherein the upper hub wheel 10 and the lower hub wheel are connected by threads and said threads are formed on the steep, matching sides 11 of the hubs, re-

sulting in reduced wear and improved handling. Advantageously a socket-sleeve 13 reduces the risk of entanglement, while a cut-out 16 facilitates assembly / disassembly of the hub wheels; a horizontally extending, abrasive media 23 allows improved, optical control during application.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 14 17 0526

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
