(54) **Refrigeration appliance**

(57) The present invention relates to a refrigeration appliance. The refrigeration appliance includes an accommodating housing (1) with an accommodating cavity (10) having an open end, at least one electrical component (3) disposed in the accommodating housing (1), and a cover (2) for sealing the accommodating cavity (10), the accommodating housing (1) having a first side (141) and a second side (142) opposite to each other. According to the present invention, the refrigeration appliance further includes a seal ring (4) between the cover (2) and the accommodating housing (1), one of the cover (2) and

the first side (141) of the accommodating housing (1) is provided with a slot (171, 172), the other of the cover (2) and the accommodating housing (1) is provided with an insert portion (2111) for being inserted into the slot (171, 172), an angle is formed between a direction in which the insert portion (2111) is inserted into the slot (171, 172) and a central axis (A) of the accommodating housing (1), the second side (142) is connected to the cover (2) by at least one fixing mechanism, and the fixing mechanism makes the cover (2) press the seal ring (4) in a direction towards the accommodating housing (1).
