(54) REMOTE MONITORING OF VULNERABLE PEOPLE

(57) A system for alerting a remote user to a potential incident concerning a vulnerable person comprises:
a hub module for location in the same building as the vulnerable person, comprising means for data communication with a cellular wireless data network;
a plurality of sensors arranged to establish a short-range data connection with said hub module;
an identifying module forming part of, or in short-range data connection with the hub module and arranged to determine the presence of a particular individual;
a server remote from the building arranged in data communication with the hub module and comprising a user interface by which a user can specify one or more rules for triggering an alert, said rule(s) involving output of one or more of the sensors. The system is arranged to monitor the output of the sensors to determine whether any rule has been met and, if a rule has been met, to issue a predefined alert.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
