(54) **DREDGING VESSEL**

(57) Described is a dredging vessel (100) which is provided with a hold (101) for holding dredged material and with a pick-up means (9) for taking material in relatively dry state out of the hold (101) and feeding removed material to a processing unit (20). The processing unit comprises pump means (6) and is further configured to

bring supplied material together with a carrier liquid so that a pumpable substance results which can be pumped by means of said pump means to a storage. The dredging vessel allows a relatively dry load to be unloaded in efficient manner. The dredging vessel can also comprise a larger hold than usual.
