### (54) CONNECTING MEANS FOR DETACHABLY CONNECTING ELEMENTS OF A WARP YARN POSITIONING SYSTEM ON A WEAVING LOOM

(57) This invention relates to a set of coupling parts for detachably connecting elements of a warp yarn positioning system on a weaving loom, comprising a first (10) and a second coupling part (20) which are not interconnectable and an adaptor (30) designed to connect with connection means (12) of the first coupling part (10), and with connection means (21) of the second coupling part (20), at least one of said connections being detachable; the invention also relates to the adaptor itself as well as to a warp yarn positioning system comprising means for transmitting motion from a motion-inducing device to one or more warp yarns, comprising a first element connected to a first coupling part (10) and a second element connected to a second coupling part (20) which is not interconnectable with said first coupling part (10), and an adaptor (30) connected with the first (12) and the second connection means (21).

ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.

EP 17 16 4828

5 This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
