## Description

## BACKGROUND

[0001] A variety of amino acid derivatives are known in the art for a variety of uses. For example, U.S. Pat. No. 5,874,068, WO2003/013454, and US2010/0330136 disclose the use of Lauryl arginine ethyl ester ("LAE"), and certain related compounds, for use in oral compositions. In addition, LAE is currently used in hydroalcoholic mouth rinses to prevent bacterial attachment. However, applicants have recognized that LAE tends to lack sufficient stability to be useful in low-alcohol or alcohol-free mouth rinses.

[0002] In addition, other documents such as WO2008/137758A2 and WO2000/011022 disclose broad classes of compounds, which may include certain amino acid derivatives, for uses such as for drug delivery or anti-tumor end benefits, respectively.

## DESCRIPTION OF THE INVENTION

[0004] The present invention relates to new amino acid derivatives developed by applicants that are described by the Formula I:

(I)

wherein:

R<sub>1</sub> is a C<sub>7</sub>-C<sub>17</sub> alkyl group;

R<sub>2</sub> is -NH<sub>2</sub>; said salt versions having an anion X<sup>-</sup> preferably selected from the group consisting of acetate, benzoate, besylate, bromide, chloride, chlortheophyllinate, citrate, ethandisulfonate, fumarate, gluconate, hippurate, iodide, fluoride, lactate, laurylsulfate, malate, laeate, mesylate, methysulfate, napsylate, nitrate, octadecanoate, oxalate, pamoate, phosphate, polygalacturonate, succinate, sulfate, tartrate, and tosylate;

n is from 1 to 3; and

R<sub>3</sub> is a linear or branched, saturated or unsaturated aliphatic group having from 1 to 6 carbon atoms.

R<sub>1</sub> is linear or branched alkyl group having a carbon chain of from 7 to 17 carbons atoms, including for example, heptyl, octyl, nonyl, decyl, undecyl, dodecyl, tridecyl, tetradecyl, pentadecyl, hexadecyl and heptadecyl. In still other embodiments, R<sub>1</sub> is linear or branched alkyl group having a carbon chain of from 9 to 14 carbons atoms, including for example, decyl, undecyl, dodecyl up to tetradecyl. In certain embodiments, R<sub>1</sub> is an undecyl group. In certain embodiments, R<sub>1</sub> is a heptyl group. In certain embodiments, R<sub>1</sub> is a heptadecyl group.

[0005] The compositions of Formula I comprise an R<sub>2</sub> group that is an amine group in its free base form (-NH<sub>2</sub>) or a salt thereof as described in the claims. Examples of suitable amine salts include salts of such groups having an anion (X<sup>-</sup>) selected from the group consisting of acetate, benzoate, besylate, bromide, chloride, chlortheophyllinate, citrate,

ethandisulfonate, fumarate, gluconate, hippurate, iodide, fluoride, lactate, laurylsulfate, malate, laeate, mesylate, methylsulfate, napsylate, nitrate, octadecanoate, oxalate, pamoate, phosphate, polygalacturonate, succinate, sulfate, tartrate, and tosylate. In certain other embodiments, the R<sub>2</sub> amine salt has an anion selected from the group consisting of acetate, benzoate, bromide, chloride, citrate, fumarate, gluconate, iodide, fluoride, lactate, malate, nitrate, oxalate, phosphate, sulfate, and in certain other embodiments an anion selected from the group consisting of bromide, chloride, iodide, fluoride, oxalate, and phosphate.

**[0006]** The compositions of Formula I may have any suitable linear or branched, saturated or unsaturated aliphatic group having from 1 to 6 carbons for R<sub>3</sub>. Examples of suitable linear or branched, saturated or unsaturated aliphatic groups having from 1 to 6 carbons include, C<sub>1</sub> to C<sub>6</sub> linear or branched alkyl groups, such as, methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl, tert-butyl, pentyl, tert-pentyl, neopentyl, isopentyl, hexyl, isohexyl, neohexyl; as well as, C<sub>2</sub> to C<sub>6</sub> linear or branched alkenyl groups such as vinyl, allyl, propenyl, butenyl, pentenyl, hexenyl, and the like. In certain embodiments, R<sub>3</sub> is linear or branched alkyl group having a carbon chain of from 1 to 4 carbons atoms, including for example, methyl, ethyl, propyl, isopropyl, butyl, sec-butyl, isobutyl, and tert-butyl. In certain other embodiments, R<sub>3</sub> is linear or branched alkyl group having a carbon chain of from 1 to 3 carbons atoms, including for example, methyl, ethyl, propyl and isopropyl. In certain embodiments, R<sub>3</sub> is an ethyl group.

**[0007]** In certain embodiments, R<sub>3</sub> is linear or branched alkenyl group having a carbon chain of from 2 to 6 carbons atoms, including for example, vinyl, allyl, propenyl, butenyl, pentenyl, hexenyl, and the like as well as mixture thereof. In certain other embodiments, R<sub>3</sub> is linear or branched alkylene group having a carbon chain of from 2 to 4 carbons atoms, including for example, vinyl, allyl, propenyl, and butenyl.

**[0008]** In the compounds of Formula I, n is from 1 to 3. In certain other embodiments n is 1, in other embodiments n is 2 in other embodiments n is 3.

**[0009]** In certain other embodiments, the compounds of Formula I are compounds wherein R<sub>2</sub> is an amine group in its free base form (-NH<sub>2</sub>) or a salt thereof; and n is 1 or 3. Examples of such compounds include those wherein n is 3; R<sub>1</sub> is a C<sub>7</sub>-C<sub>17</sub> alkyl group, including for example an alkyl group, having 7 carbon atoms; and R<sub>3</sub> is a linear or branched, saturated or unsaturated aliphatic group, including for example an alkyl group, having a carbon chain length of 1 to 11 carbons atoms, including from 2 to 10 carbon atoms, 2 to 9 carbon atoms, 2 to 8 carbon atoms, 3 to 11 carbon atoms, 3 to 10 carbon atoms, 3 to 9 carbon atoms, 3 to 8 carbon atoms, and 8, and/or 11 carbon atoms. Other Examples include compounds wherein n is 3; R<sub>1</sub> is a C<sub>7</sub>-C<sub>17</sub> alkyl group, including for example an alkyl group, having 11 carbon atoms; and R<sub>3</sub> is a linear or branched, saturated or unsaturated aliphatic group, including for example an alkyl group, having a carbon chain length of 1 to 11 carbons atoms, including from 1 to 10 carbon atoms, 1 to 9 carbon atoms, 1 to 8 carbon atoms, 1 to 7 carbon atoms, 1 to 6 carbon atoms, 2 to 11 carbon atoms, 2 to 10 carbon atoms, 2 to 9 carbon atoms, 2 to 8 carbon atoms, 2 to 7 carbon atoms, 2 to 6 carbon atoms, and 2 and/or 6 carbon atoms.

**[0010]** Disclosed herein is the reference compound [amino({[4-dodecanamido-4-(ethylcarbamoyl)butyl]amino})methylidene]azanium (compound 9) as shown below.

**[0011]** Other compounds disclosed herein are:

**[0012]** Any of a variety of suitable methods for synthesizing the compounds of the present invention may be used. One particular method for synthesizing [amino({[4-dodecanamido-4-(ethylcarbamoyl)butyl]amino})methylidene]azanium is described in Example 1. As will be recognized by those of skill in the art, other similar compounds of Formula I may be synthesized in a similar manner using the appropriate starting materials to achieve the appropriate  $R_1$ ,  $R_2$ ,  $R_3$  and  $n$  substitution on the molecule without undue experimentation.

**[0013]** Applicants have recognized that the compounds of the present invention provide a wide variety of benefits, including, for example, in compositions for use in healthcare applications. Accordingly, in certain embodiments, the present invention is directed to healthcare compositions comprising at least one compound of Formula I. Such healthcare compositions may be in any suitable form for use as, in, or on personal care, cosmetic, pharmaceutical, and medical device products, and the like. In certain preferred embodiments, the compositions of the present invention are compositions for oral care, including, for example, oral care compositions in the form of a solution, mouthwash, mouth rinse, mouth spray, toothpaste, tooth gel, sub-gingival gel, mousse, foam, denture care product, dentifrice, lozenge, chewable tablet, dissolvable tablet, dry powder and the like. The oral care composition may also be incorporated into or onto floss, dissolvable strips or films or integrated into or onto a device or applicator for oral use.

**[0014]** In certain embodiments, the compositions of the invention comprise at least one composition of Formula I and a vehicle. Any suitable vehicle may be used in the compositions of the present invention. Preferably, the vehicle is selected from the group consisting of cosmetically-acceptable and pharmaceutically-acceptable vehicles. As used herein, "cosmetically-acceptable" and "pharmaceutically-acceptable" vehicles are liquid, solid, or other ingredients suitable for

use as vehicles in products for mammals, including humans without undue toxicity, incompatibility, instability, irritation, allergic response, and the like.

**[0015]** For liquid compositions, the vehicle may be any suitable aqueous or non-aqueous liquid vehicle. In certain embodiments, the liquid vehicle comprises water. For example, in many compositions, as will be understood by those of skill in the art, water is added to q.s. (Quantum Sufficit, Latin for "as much as needed") the composition. In certain embodiments, the composition comprises from 60% to 99.99% water, including from 70% to 95% water, from 80% to 95% water, from 60% to 90% water, from 60% to 80% water, or from 60% to 75% water.

**[0016]** In certain embodiments, alcohol may be added to the composition. Any of a variety of alcohols represented by the formula  $R_4\text{-OH}$ , wherein  $R_4$  is an alkyl group having from 2 to 6 carbons, may be used in the present invention. Examples of suitable alcohols of formula  $R_4\text{-OH}$  include ethanol; n-propanol, iso-propanol; butanols; pentanols; hexanols, and combinations of two or more thereof, and the like. In certain embodiments, the alcohol is, or comprises, ethanol.

**[0017]** In some embodiments, the alcohol may be present in the composition in an amount of at least 10.0% v/v of the total composition, or from 10% to 35% v/v of the total composition, or from 15% to 30% v/v of the total composition and may be from 20% to 25% v/v of the total composition.

**[0018]** Applicants have discovered that the compounds of the present invention exhibit increased stability in low-alcohol or alcohol free formulations, while maintaining other oral care benefits, as compared to previously known amino acid derivative compounds. Accordingly, in some embodiments, the composition may comprise a reduced level of alcohol. The phrase "reduced level" of alcohol means an amount of a  $R_4\text{-OH}$  alcohol of 10% v/v or less, optionally of 5% v/v or less, optionally of 1% v/v or less, optionally of 0.1% v/v or less by volume of the total composition. In certain embodiments, the compositions of the present invention are free of  $R_4\text{-OH}$  alcohols.

**[0019]** Alternatively, the compositions of the present invention may be formulated in a dissolvable tablet, dry powder, chewing gum, film, semi-solid, solid or liquid concentrate form. In such embodiments, for example, water is added to q. s. as necessary in the case of liquid dissolvable tablet, concentrates or powdered formulations, or water may be removed using standard evaporation procedures known in the art to produce a composition in dry powder form. Evaporated, or freeze dried forms are advantageous for storage and shipping.

**[0020]** Any suitable amounts of one or more compounds of Formula I may be used in the compositions of the present invention. In certain embodiments, the compositions comprise a total amount of compounds of Formula I (whether the composition comprises only one compound of Formula I or a combination of two or more thereof) of 0.0001 % to 50% w/w of active/solid amount of total compounds of Formula I based on the total weight of the composition. In certain embodiments, the percent of total compound(s) of Formula I is from 0.001% to 10 %, or from 0.01% to 1%, or from 0.05% to 0.5% w/w of active/solid amount of total compounds of Formula I based on the total weight of the composition.

**[0021]** In certain embodiments, as will be recognized by those of skill in the art, compounds made in accord with the present invention may be purified and/or may comprise a mixture of two or more compounds of Formula I. In certain embodiments, the compositions of the present invention comprise a combination of at least two compounds of Formula I. In certain embodiments, the compositions of the present invention comprise a combination of at least three compounds of Formula I.

**[0022]** The compositions of the present invention may further comprise any of a variety of optional ingredients therein, including, but not limited to oily components, active ingredients, additional surfactants, humectants, solvents, flavors, sweeteners, colorants, preservatives, pH adjusters, pH buffers, and the like.

**[0023]** Any of a variety of oily components may be used in the present compositions. The oily component may comprise any one or more oils, or other materials that are water insoluble, or substantially water-insoluble, meaning that its solubility is less than 1% by weight in water at 25°C or, optionally, less than 0.1%. In certain embodiments, the oily component of the present invention comprises, consists essentially of, or consists of, at least one essential oil, i.e. a natural or synthetic (or combination thereof) concentrated hydrophobic material of vegetable origin, generally containing volatile compounds, at least one flavor oil, or a combination of two or more thereof. Examples of suitable essential oils, flavor oils, and their amounts are described below. In certain embodiments, the composition comprises a total amount of oily component of 0.05% w/w or more, 0.1% w/w or more, or 0.2% w/w or more of oily component.

**[0024]** In certain embodiments, compositions of the present invention comprise essential oils. Essential oils are volatile aromatic oils which may be synthetic or may be derived from plants by distillation, expression or extraction, and which usually carry the odor or flavor of the plant from which they are obtained. Useful essential oils may provide antiseptic activity. Some of these essential oils also act as flavoring agents. Useful essential oils include but are not limited to citra, thymol, menthol, methyl salicylate (wintergreen oil), eucalyptol, carvacrol, camphor, anethole, carvone, eugenol, iso-eugenol, limonene, osimen, n-decyl alcohol, citronel, a-salpineol, methyl acetate, citronellyl acetate, methyl eugenol, cineol, linalool, ethyl linalool, safrola vanillin, spearmint oil, peppermint oil, lemon oil, orange oil, sage oil, rosemary oil, cinnamon oil, pimento oil, laurel oil, cedar leaf oil, gerianol, verbenone, anise oil, bay oil, benzaldehyde, bergamot oil, bitter almond, chlorothymol, cinnamic aldehyde, citronella oil, clove oil, coal tar, eucalyptus oil, guaiacol, tropolone derivatives such as hinokitiol, avender oil, mustard oil, phenol, phenyl salicylate, pine oil, pine needle oil, sassafras oil, spike lavender oil, storax, thyme oil, tolu balsam, terpentine oil, clove oil, and combinations thereof.

**[0025]** In certain embodiments, the essential oils are selected from the group consisting of thymol ( $(\text{CH}_3)_2\text{CHC}_6\text{H}_3(\text{CH}_3)\text{OH}$ , also known as isopropyl-m-cresol), eucalyptol ( $\text{C}_{10}\text{H}_{18}\text{O}$ , also known as cineol), menthol ( $\text{CH}_3\text{C}_6\text{H}_9(\text{C}_3\text{H}_7)\text{OH}$ , also known as hexahydrothymol), methyl salicylate ( $\text{C}_6\text{H}_4\text{OHCOOCH}_3$ , also known as wintergreen oil), isomers of each of these compounds, and combinations of two or more thereof. In some embodiments, the compositions of the present invention contain thymol. In some embodiments, the compositions of the present invention contain menthol. In some embodiments, the composition contains all four of these essential oils.

**[0026]** In certain embodiments, thymol is employed in amounts of from 0.0001% to 0.6% w/v, or from 0.005% to 0.07% w/v of the composition. In certain embodiments, eucalyptol may be employed in amounts of from 0.0001% to 0.51 w/v, or from 0.0085% to 0.10% w/v of the composition. In certain embodiments, menthol is employed in amounts of from 0.0001% to 0.25% w/v, or from 0.0035% to 0.05% w/v of the composition. In certain embodiments, methyl salicylate is employed in amounts of from 0.0001% to 0.28% w/v, or from 0.004% to 0.07% w/v of the composition. In certain embodiments, the total amount of all of such essential oils present in the disclosed compositions can be from 0.0004% to 1.64% w/v, or from 0.0165% to 0.49% w/v of the composition.

**[0027]** In certain embodiments, fluoride providing compounds may be present in the mouth rinse compositions of this invention. These compounds may be slightly water soluble or may be fully water soluble and are characterized by their ability to release fluoride ions or fluoride containing ions in water. Typical fluoride providing compounds are inorganic fluoride salts such as soluble alkali metal, alkaline earth metal, and heavy metal salts, for example, sodium fluoride, potassium fluoride, ammonium fluoride, cupric fluoride, zinc fluoride, stannic fluoride, stannous fluoride, barium fluoride, sodium hexafluorosilicate, ammonium hexafluorosilicate, sodium fluorozirconate, sodium monofluorophosphate, aluminum mono- and difluorophosphate and fluorinated sodium calcium pyrophosphate. Amine fluorides, such as N'-octadecyltrimethylendiamine-N,N,N'-tris(2-ethanol)-dihydrofluoride and 9-octadecenylamine-hydrofluoride, may also be used. In certain embodiments, the fluoride providing compound is generally present in an amount sufficient to release up to 5%, or from 0.001% to 2%, or from 0.005% to 1.5% fluoride by weight of the composition.

**[0028]** In certain embodiments, sensitivity reducing agents, such as potassium salts of nitrate and oxalate in an amount from 0.1% to 5.0% w/v of the composition may be incorporated into the present invention. Other potassium releasing compounds are feasible (e.g. KCl). High concentrations of calcium phosphates may also provide some added sensitivity relief. These agents are believed to work by either forming an occlusive surface mineral deposit on the tooth surface or through providing potassium to the nerves within the teeth to depolarize the nerves. A more detailed discussion of suitable sensitivity reducing agents can be found in US 2006/0013778 to Hodosh and U.S. Pat. No. 6,416,745 to Markowitz et al.

**[0029]** In certain embodiments, compounds with anti-calculus benefits (e.g. various carboxylates, polyaspartic acid, etc.) may be incorporated into the present invention. Also useful as an anticalculus agent are the anionic polymeric polycarboxylates. Such materials are well known in the art, being employed in the form of their free acids or partially or preferably fully neutralized water soluble alkali metal (e.g. potassium and preferably sodium) or ammonium salts. Preferred are 1:4 to 4:1 by weight copolymers of maleic anhydride or acid with another polymerizable ethylenically unsaturated monomer, preferably methyl vinyl ether (methoxyethylene) having a molecular weight (M.W.) of 30,000 to 1,000,000. These copolymers are available, for example, as Gantrez 25 AN 139 (M.W. 500,000), AN 119 (M.W. 250,000) and preferably S-97 Pharmaceutical Grade (M.W. 70,000), of GAF Chemicals Corporation.

**[0030]** Additional anti-calculus agents may be selected from the group consisting of polyphosphates (including pyrophosphates) and salts thereof polyamino propane sulfonic acid (AMPS) and salts thereof; polyolefin sulfonates and salts thereof; polyvinyl phosphates and salts thereof; polyolefin phosphates and salts thereof; diphosphonates and salts thereof; phosphonoalkane carboxylic acid and salts thereof; polyphosphonates and salts thereof; polyvinyl phosphonates and salts thereof; polyolefin phosphonates and salts thereof; polypeptides; and mixtures thereof; carboxy-substituted polymers; and mixtures thereof. In one embodiment, the salts are alkali metal or ammonium salts. Polyphosphates are generally employed as their wholly or partially neutralized water-soluble alkali metal salts such as potassium, sodium, ammonium salts, and mixtures thereof. The inorganic polyphosphate salts include alkali metal (e.g. sodium) tripolyphosphate, tetrapolyphosphate, dialkyl metal (e.g. disodium) diacid, trialkyl metal (e.g. trisodium) monoacid, potassium hydrogen phosphate, sodium hydrogen phosphate, and alkali metal (e.g. sodium) hexametaphosphate, and mixtures thereof. Polyphosphates larger than tetrapolyphosphate usually occur as amorphous glassy materials. In one embodiment the polyphosphates are those manufactured by FMC Corporation, which are commercially known as Sodaphos ( $n \approx 6$ ), Hexaphos ( $n \approx 13$ ), and Glass H ( $n \approx 21$ , sodium hexametaphosphate), and mixtures thereof. The pyrophosphate salts useful in the present invention include, alkali metal pyrophosphates, di-, tri-, and mono-potassium or sodium pyrophosphates, dialkali metal pyrophosphate salts, tetraalkali metal pyrophosphate salts, and mixtures thereof. In one embodiment the pyrophosphate salt is selected from the group consisting of trisodium pyrophosphate, disodium dihydrogen pyrophosphate ( $\text{Na}_2\text{H}_2\text{P}_2\text{O}_7$ ), dipotassium pyrophosphate, tetrasodium pyrophosphate ( $\text{Na}_4\text{P}_2\text{O}_7$ ), tetrapotassium pyrophosphate ( $\text{K}_4\text{P}_2\text{O}_7$ ), and mixtures thereof. Polyolefin sulfonates include those wherein the olefin group contains 2 or more carbon atoms, and salts thereof. Polyolefin phosphonates include those wherein the olefin group contains 2 or more carbon atoms. Polyvinylphosphonates include polyvinylphosphonic acid. Diphosphonates and salts thereof

include azocycloalkane-2,2-diphosphonic acids and salts thereof, ions of azocycloalkane-2,2-diphosphonic acids and salts thereof, azacyclohexane-2,2-diphosphonic acid, azacyclopentane-2,2-diphosphonic acid, N-methyl-azacyclopentane-2,3-diphosphonic acid, EHDP (ethane-1-hydroxy-1,1,-diphosphonic acid), AHP (azacycloheptane-2,2-diphosphonic acid), ethane-1-amino-1,1-diphosphonate, dichloromethane-diphosphonate, etc. Phosphonoalkane carboxylic acid or their alkali metal salts include PPTA (phosphonopropane tricarboxylic acid), PBTA (phosphonobutane-1,2,4-tricarboxylic acid), each as acid or alkali metal salts. Polyolefin phosphates include those wherein the olefin group contains 2 or more carbon atoms. Polypeptides include polyaspartic and polyglutamic acids.

**[0031]** In certain embodiments, zinc salts such as zinc chloride, zinc acetate or zinc citrate may be added as an astringent for an "antiseptic cleaning" feeling, as a breath protection enhancer or as anti-calculus agent in an amount of from 0.0025% w/v to 0.75% w/v of the composition.

**[0032]** Any of a variety of additional surfactants may be used in the present invention. Suitable surfactants may include anionic, non-ionic, cationic, amphoteric, zwitterionic surfactants, and combinations of two or more thereof. Examples of suitable surfactants are disclosed, for example, in U.S. Pat. No. 7,417,020 to Fevola, et al.

**[0033]** In certain embodiments, the compositions of the present invention comprise a non-ionic surfactant. Those of skill in the art will recognize that any of a variety of one or more non-ionic surfactants include, but are not limited to, compounds produced by the condensation of alkylene oxide groups (hydrophilic in nature) with an organic hydrophobic compound which may be aliphatic or alkyl-aromatic in nature. Examples of suitable nonionic surfactants include, but are not limited to, alkyl polyglucosides; alkyl glucose amines, block copolymers such as ethylene oxide and propylene oxide copolymers e.g. Poloxamers; ethoxylated hydrogenated castor oils available commercially for example under the trade name CRODURET (Croda Inc., Edison, NJ); alkyl polyethylene oxide e.g. Polysorbates, and/or; fatty alcohol ethoxylates; polyethylene oxide condensates of alkyl phenols; products derived from the condensation of ethylene oxide with the reaction product of propylene oxide and ethylene diamine; ethylene oxide condensates of aliphatic alcohols; long chain tertiary amine oxides; long chain tertiary phosphine oxides; long chain dialkyl sulfoxides; and mixtures thereof.

**[0034]** Exemplary non-ionic surfactants are selected from the group known as poly(oxyethylene)-poly(oxypropylene) block copolymers. Such copolymers are known commercially as poloxamers and are produced in a wide range of structures and molecular weights with varying contents of ethylene oxide. These non-ionic poloxamers are non-toxic and acceptable as direct food additives. They are stable and readily dispersible in aqueous systems and are compatible with a wide variety of formulations and other ingredients for oral preparations. These surfactants should have an HLB (Hydrophilic-Lipophilic Balance) of between 10 and 30 and preferably between about 10 and about 25. By way of example, non-ionic surfactants useful in this invention include the poloxamers identified as poloxamers 105, 108, 124, 184, 185, 188, 215, 217, 234, 235, 237, 238, 284, 288, 333, 334, 335, 338, 407, and combinations of two or more thereof. In certain preferred embodiments, the composition comprises poloxamer 407.

**[0035]** In certain embodiments, the compositions of the claimed invention comprise less than 9% of non-ionic surfactant, less than 5%, or less than 1.5%, or less than 1%, or less than 0.8, less than 0.5%, less than 0.4%, or less than .3% of non-ionic surfactants. In certain embodiments, the composition of the present invention is free of non-ionic surfactants.

**[0036]** In certain embodiments, the compositions of the present invention also contain at least one alkyl sulfate surfactant. In certain embodiments, suitable alkyl sulfate surfactants include, but are not limited to sulfated C<sub>8</sub> to C<sub>18</sub>, optionally sulfated C<sub>10</sub> to C<sub>16</sub> even numbered carbon chain length alcohols neutralized with a suitable basic salt such as sodium carbonate or sodium hydroxide and mixtures thereof such that the alkyl sulfate surfactant has an even numbered C<sub>8</sub> to C<sub>18</sub>, optionally C<sub>10</sub> to C<sub>16</sub>, chain length. In certain embodiments, the alkyl sulfate is selected from the group consisting of sodium lauryl sulfate, hexadecyl sulfate and mixtures thereof. In certain embodiments, commercially available mixtures of alkyl sulfates are used. A typical percentage breakdown of alkyl sulfates by alkyl chain length in commercially available sodium lauryl sulfate (SLS) is as follows:

Alkyl Chain Length	Component Percentage in SLS
C <sub>12</sub>	>60%
C <sub>14</sub>	20%-35%
C <sub>16</sub>	<10%
C <sub>10</sub>	<1%
C <sub>18</sub>	<1%

**[0037]** In certain embodiments, the alkyl sulfate surfactant is present in the composition from 0.001% to 6.0% w/v, or optionally from 0.1% to 0.5% w/v of the composition.

**[0038]** Another suitable surfactant is one selected from the group consisting of sarcosinate surfactants, isethionate surfactants and taurate surfactants. Preferred for use herein are alkali metal or ammonium salts of these surfactants, such as the sodium and potassium salts of the following: lauroyl sarcosinate, myristoyl sarcosinate, palmitoyl sarcosinate, stearoyl sarcosinate and oleoyl sarcosinate. The sarcosinate surfactant may be present in the compositions of the

present invention from 0.1% to 2.5%, or from 0.5% to 2% by weight of the total composition.

**[0039]** Zwitterionic synthetic surfactants useful in the present invention include derivatives of aliphatic quaternary ammonium, phosphonium, and sulfonium compounds, in which the aliphatic radicals can be straight chain or branched, and wherein one of the aliphatic substituents contains from 8 to 18 carbon atoms and one contains an anionic water-solubilizing group, e.g., carboxy, sulfonate, sulfate, phosphate or phosphonate.

**[0040]** The amphoteric surfactants useful in the present invention include, but are not limited to, derivatives of aliphatic secondary and tertiary amines in which the aliphatic radical can be a straight chain or branched and wherein one of the aliphatic substituents contains from 8 to 18 carbon atoms and one contains an anionic water-solubilizing group, e.g., carboxylate, sulfonate, sulfate, phosphate, or phosphonate. Examples of suitable amphoteric surfactants include, but are not limited to alkylimino-dipropionates, alkylamphoglycinates (mono or di), alkylamphopropionates (mono or di), alkylamphoacetates (mono or di), N-alkyl [3-aminopropionic acids, alkylpolyamino carboxylates, phosphorylated imidazolines, alkyl betaines, alkylamido betaines, alkylamidopropyl betaines, alkyl sultaines, alkylamido sultaines, and mixtures thereof. In certain embodiments, the amphoteric surfactant is selected from the group consisting of alkylamidopropyl betaines, amphoacetates such as sodium auroamphoacetate and mixtures thereof. Mixtures of any of the above mentioned surfactants can also be employed. A more detailed discussion of anionic, nonionic and amphoteric surfactants can be found in U.S. Pat. No. 7,087,650 to Lennon; U.S. Pat. No. 7,084,104 to Martin et al.; U.S. Pat. No. 5,190,747 to Sekiguchi et al.; and U.S. Pat. No. 4,051,234, Gieske, et al.

**[0041]** In certain embodiments, the compositions of the claimed invention comprise less than 9% of amphoteric surfactant, less than 5%, or less than 1.5%, or less than 1%, or less than 0.8, less than 0.5%, less than 0.4%, or less than 0.3% of amphoteric surfactants. In certain embodiments, the composition of the present invention is free of amphoteric surfactants.

**[0042]** Additional surfactants may be added with the alkyl sulfate surfactant to aid in solubilization of the essential oils provided such surfactants do not affect the bioavailability of the essential oils. Suitable examples include additional anionic surfactants, nonionic surfactants, amphoteric surfactants and mixtures thereof. However, in certain embodiments, the total surfactant concentration (including the alkyl sulfate surfactant alone or in combination with other surfactants) for mouth rinses of the present invention should not exceed or should be about 9% or less, optionally, the total surfactant concentration should be 5% or less, optionally about 1% or less, optionally 0.5% or less w/w% of active surfactant by weight of the composition.

**[0043]** In certain embodiments, a sugar alcohol (humectant) is also added to the oral compositions of the present invention. The sugar alcohol solvent(s) may be selected from those multi-hydroxy-functional compounds that are conventionally used in oral and ingestible products. In certain embodiments, the sugar alcohol (s) should be nonmetabolized and non-fermentable sugar alcohol (s). In specific embodiments, the sugar alcohols include, but are not limited to sorbitol, glycerol, xylitol, mannitol, maltitol, inositol, allitol, altritol, dulcitol, galactitol, glucitol, hexitol, iditol, pentitol, ribitol, erythritol and mixtures thereof. Optionally, the sugar alcohol is selected from the group consisting of sorbitol and xylitol or mixtures thereof. In some embodiments, the sugar alcohol is sorbitol. In certain embodiments, the total amount of sugar alcohol (s), which are added to effectively aid in the dispersion or dissolution of the mouth rinse or other ingredients, should not exceed 50% w/ of the total composition. Or, total amount of sugar alcohol should not exceed 30% w/v of the total composition. Or, total amount of sugar alcohol should not exceed 25% w/v of the total composition. The sugar alcohol can be in an amount of from 1.0% to 24% w/v, or from 1.5% to 22% w/v, or from 2.5% to 20% w/v of the total composition.

**[0044]** In certain embodiments, a polyol solvent is added to the composition. The polyol solvent comprises a polyol or polyhydric alcohol selected from the group consisting of polyhydric alkanes (such as propylene glycol, glycerin, butylene glycol, hexylene glycol, 1,3-propanediol); polyhydric alkane esters (dipropylene glycol, ethoxydiglycol); polyalkene glycols (such as polyethylene glycol, polypropylene glycol) and mixtures thereof. In certain embodiments, the polyol solvent can be present in an amount of from 0% to 40% w/v, or from 0.5% to 20% w/v, or from 1.0% to 10% w/v of the composition.

**[0045]** In certain embodiments, the compositions of the present invention have a pH of 11 or less. In some embodiments, the compositions have a pH of from 7, or from 3.5 to 6.5, or from 3.5 to 5.0.

**[0046]** As will be recognized by those of skill in the art, the pH of the composition may be adjusted or maintained using a buffer in an amount effective to provide the composition with a pH at or below 11. The composition can optionally comprise at least one pH modifying agents among those useful herein include acidifying agents to lower pH, basifying agents to raise pH, and buffering agents to maintain pH within a desired range. For example, one or more compounds selected from acidifying, basifying and buffering agents can be included to provide a pH of 2 to 7, or in various embodiments from 3 to 6, or from 4 to 5. Any orally acceptable pH modifying agent can be used including without limitation hydrochloric, carboxylic and sulfonic acids, acid salts (e.g., monosodium citrate, disodium citrate, monosodium malate, etc.), alkali metal hydroxides such as sodium hydroxide, borates, silicates, imidazole and mixtures thereof. One or more pH modifying agents are optionally present in a total amount effective to maintain the composition in an orally acceptable pH range. In certain embodiments, inorganic acids may be used as the buffer added to the composition.

**[0047]** In certain embodiments, organic acids may be used as the buffer added to the composition. Organic acids

suitable for use in the compositions of the present invention include, but are not limited to, ascorbic acid, sorbic acid, citric acid, glycolic acid, lactic acid and acetic acid, benzoic acid, salicylic acid, phthalic acid, phenolsulphonic acid, and mixtures thereof, optionally, the organic acid is selected from the group consisting of benzoic acid, sorbic acid, citric acid and mixtures thereof, or optionally, the organic acid is benzoic acid.

**[0048]** Generally the amount of buffering compound is from 0.001% to 20.0% of the composition. In certain embodiment, the organic acid buffer is present in amounts of from 0.001% to 10% w/v of the composition, or from 0.01% to 1% of the composition.

**[0049]** In certain embodiments, additional conventional components may be added as in mouthwashes and mouth rinses of the prior art. Whereas some alcohol containing mouth rinses have a pH of about 7.0, reduction of the alcohol level may require the addition of acidic preservatives, such as sorbic acid or benzoic acid, which reduce pH levels. Buffer systems are then necessary to control the pH of the composition at optimal levels. This is generally accomplished through the addition of a weak acid and its salt or a weak base and its salt. In some embodiments, useful systems have been found to be sodium benzoate and benzoic acid in amounts of from 0.01% to 1.0% w/v of the composition, and sodium citrate and citric acid in amounts of from 0.001% to 1.0% w/v of the composition, phosphoric acid and sodium/potassium phosphate of amounts from 0.01% to 1.0% by weight of the composition. In certain embodiments, the buffers are incorporated in amounts that maintain the pH at levels off from 3.0 to 8.0, optionally from 3.5 to 6.5, optionally from 3.5 to 5.0.

**[0050]** Additional buffering agents include alkali metal hydroxides, ammonium hydroxide, organic ammonium compounds, carbonates, sesquicarbonates, borates, silicates, phosphates, imidazole, and mixtures thereof. Specific buffering agents include monosodium phosphate, trisodium phosphate, sodium hydroxide, potassium hydroxide, alkali metal carbonate salts, sodium carbonate, imidazole, pyrophosphate salts, sodium gluconate, sodium lactate, citric acid, and sodium citrate.

**[0051]** Sweeteners such as aspartame, sodium saccharin (saccharin), sucralose, stevia, acesulfame K and the like may be added for better taste in amounts of from 0.0001% w/v to 1.0% w/v. In certain preferred embodiments, the sweetener comprises sucralose.

**[0052]** In certain embodiments, the composition further comprises flavors or flavorants to modify or magnify the taste of the composition, or reduce or mask the sharp "bite" or "burn" of ingredients such as thymol. Suitable flavors include, but are not limited to, flavor oils such as oil of anise, anethole, benzyl alcohol, spearmint oil, citrus oils, vanillin and the like may be incorporated. Other flavors such as citrus oils, vanillin and the like may be incorporated to provide further taste variations. In these embodiments, the amount of flavor oil added to the composition can be from 0.001% to 5% w/v, or from 0.01% to 0.3% w/v of the total composition. The particular flavors or flavorants, and other taste improving ingredients, employed will vary depending upon the particular taste and feel desired. Those skilled in the art can select and customize these types of ingredients to provide the desired results.

**[0053]** In certain embodiments, acceptably approved food dyes may be used to provide a pleasing color to the compositions of the invention. These may be selected from, but not limited to, the long list of acceptable food dyes. Suitable dyes for this purpose include FD&C yellow #5, FD&C yellow #10, FD&C blue #1 and FD&C green #3. These are added in conventional amounts, typically in individual amounts of from 0.00001% w/v to 0.0008% w/v, or from 0.000035% w/v to 0.0005% w/v of the composition.

**[0054]** Other conventional ingredients may be used in the liquid or mouth rinse compositions of this invention, including those known and used in the art. Examples of such ingredients include thickeners, suspending agents and softeners. Thickeners and suspending agents useful in the compositions of the present invention can be found in US Pat. 5,328,682 to Pullen et al. In certain embodiments, these are incorporated in amounts of from 0.1% w/v to 0.6% w/v, or about 0.5% w/v of the composition.

**[0055]** In some embodiments, antimicrobial preservatives may be added to the composition. Some antimicrobial preservatives which may be used include, but are not limited to cationic antibacterials, such as sodium benzoate, polyquaternium polycationic polymers (i.e. polyquaternium-42: Poly[oxyethylene(dimethylimino)ethylene (dimethylimino)ethylene dichloride]), quaternary ammonium salts or quaternary ammonium compounds, parabens (i.e. parahydroxybenzoates or esters of parahydroxybenzoic acid), hydroxyacetophenone, 1,2-Hexanediol, Caprylyl Glycol, chlorhexidine, alexidine, hexetidine, benzalkonium chloride, domiphen bromide, cetylpyridinium chloride (CPC), tetradecylpyridinium chloride (TPC), N-tetradecyl-4-ethylpyridinium chloride (TDEPC), octenidine, bisbiguanides, zinc or stannous ion agents, grapefruit extract, and mixtures thereof. Other antibacterial and antimicrobial agents include, but are not limited to: 5-chloro-2-(2,4-dichlorophenoxy)-phenol, commonly referred to as triclosan; 8-hydroxyquinoline and its salts, copper II compounds, including, but not limited to, copper(II) chloride, copper(II) sulfate, copper(II) acetate, copper(II) fluoride and copper(II) hydroxide; phthalic acid and its salts including, but not limited to those disclosed in U.S. Pat. No. 4,994,262, including magnesium monopotassium phthalate; sanguinarine; salicylanilide; iodine; sulfonamides; phenolics; delmopinol, octapinol, and other piperidino derivatives; niacin preparations; nystatin; apple extract; thyme oil; thymol; antibiotics such as augmentin, amoxicillin, tetracycline, doxycycline, minocycline, metronidazole, neomycin, kanamycin, cetylpyridinium chloride, and clindamycin; analogs and salts of the above; methyl salicylate; hydrogen peroxide; metal salts of chlorite; pyrrolidone ethyl cocoyl arginate; lauroyl ethyl arginate monochlorohydrate; and mixtures of all of the above. In

another embodiment, the composition comprises phenolic antimicrobial compounds and mixtures thereof. Antimicrobial components may be present from 0.001% to 20% by weight of the oral care composition. In another embodiment the antimicrobial agents generally comprise from 0.1% to 5% by weight of the oral care compositions of the present invention.

**[0056]** Other antibacterial agents may be basic amino acids and salts. Other embodiments may comprise arginine.

**[0057]** Other useful oral care actives and/or inactive ingredients and further examples thereof can be found in US patents 6,682,722 to Majeti et al. and 6,121,315 to Nair et al.,.

**[0058]** The compositions of the present invention may be made according to any of a variety of methods disclosed herein and known in the art. In particular, applicants have discovered for certain oral care compositions, that the present compounds may be incorporated into oral care compositions to produce compositions that tend to be relatively more stable than prior compositions, including, for example, similar compositions comprising LAE.

**[0059]** According to certain embodiments, the compositions of the present invention may be made according to the following method(s).

**[0060]** The compounds and compositions of the present invention may be used in a variety of methods of treating a mammalian body. Such methods generally comprise introducing a compound or composition of the present invention into or onto the mammalian body to be treated. For example, certain methods comprise treating a condition or disease of the skin, mucosal membrane, hair, eye, or other part of the mammalian body by applying to the skin, mucosal membrane, hair, eye, or other part of the body, respectively, or injecting into the mammalian body, a compound or composition of the claimed invention. Certain methods comprise treating a condition or disease of the oral cavity, including the teeth, mucosal membranes/gums, and the like, by applying to the oral cavity, or injecting into the oral cavity or otherwise into the mammalian body, a compound or composition of the claimed invention.

**[0061]** The compounds and compositions of the present invention may be used in a variety of methods of treating a mammalian body, in particular for disrupting a biofilm on a surface of the oral cavity. For example disrupting biofilm on a surface by contacting the surface comprising biofilm with a composition of the present invention. Also disclosed is a method of removing biofilm from a surface by contacting the surface comprising biofilm with a composition of the present invention. Also disclosed is a method of reducing bacterial attachment to a surface by contacting the surface with a composition of the present invention. Also disclosed are methods comprising inhibiting plaque by contacting a surface of the oral cavity with a compound or composition of the present invention.

**[0062]** Any suitable surface of the oral cavity may be contacting including one or more surfaces selected from the group consisting of surfaces of one or more teeth, surfaces of the gums, combinations of two or more thereof, and the like.

**[0063]** In each of the above methods, the composition may be introduced to the surface to be contacted via any of a variety of methods. The composition may be introduced into the oral cavity and applied to the surface by a user as a mouthwash or mouth rinse. The composition may be introduced to the oral cavity and applied to the surface as a toothpaste on an article for cleaning the teeth, e.g. a toothbrush. The compositions may be further introduced via the mouth and applied to the surface as a gum, lozenge, dissolvable strip, or the like.

**[0064]** Furthermore, the contacting step of the methods described may comprise contacting the surface with the composition for any suitable amount of time. The contacting step may comprise contacting the surface for less than thirty seconds. The contacting step may comprise contacting the surface with the composition for thirty seconds or more, for example, for about thirty seconds, for about 40 seconds, for about one minute, or for greater than one minute.

## EXAMPLES

Example 1: Synthesis of reference compound [amino([4-dodecanamido-4-(ethylcarbamoyl)butyl]amino)methylidene]azanium (reference compound 9)

**[0065]**

## Reaction scheme employed for the synthesis of compound 9

**[0066]** [amino({[4-dodecanamido-4-(ethylcarbamoyl)butyl]amino})methylidene]azanium was synthesized in accord with the following procedure:

**Condensation of Protected Arginine with Ethylamine:** A mass of 19.72 g of *N*- $\alpha$ -(9-fluorenylmethyloxycarbonyl)-*N*- $\omega'$ ,*N*- $\omega''$ -bis-*tert*-butyloxycarbonyl-L-arginine (Fmoc-Arg(Boc)<sub>2</sub>-OH; 0.033050; 1.0 equivalents) and 12.80 g of 1-[Bis(dimethylamino)methylene]-1*H*-1,2,3-triazolo[4,5-*b*]pyridinium 3-oxid hexafluorophosphate (HATU; 0.033663 moles; 1.0 equivalents) was dissolved in 120 mL of dichloromethane (DCM). To this, 19.0 mL (0.038000 moles; 1.1 equivalents) of 2.0 M ethylamine in tetrahydrofuran (THF) was added to the reaction mixture. To promote the condensation reaction, 18.0 mL of diisopropylethylamine (DIEA; 0.10334 moles; 3.0 equivalents) was added to the reaction mixture and allowed to stir for 24 hours at room temperature under argon gas (Ar(g)). The reaction was followed by thin-layer chromatography by monitoring the consumption of reactants and production of product **1**. Upon completion, the reaction mixture was concentrated under vacuum and product **1** was purified over silica employing a methanol (MeOH) gradient with DCM. The purified mass of product **1** was 16.5 g, a yield of 80%.

**Fmoc-deprotection of Product 1:** A mass of 16.5 g of product **1** (0.026453 moles; 1.0 equivalents) was dissolved in 80 mL of DCM. After which 20 mL of piperidine (0.23488 moles; 8.9 equivalents) was added to the reaction mixture and allowed to stir at room temperature under Ar(g). The reaction was monitored by TLC until completion. Product **2** was concentrated under vacuum and purification was attempted over silica. The impure mass of product **2** was 10.83 g.

**Condensation of Product 2 with Lauric Acid:** A mass of 10.83 g of product **2** (0.026973 moles; 1.0 equivalents) and 11.29 g of HATU (0.029692 moles; 1.1 equivalents) was dissolved in 120 mL of DCM. To this a mass of 5.95

g of lauric acid (0.029702 moles; 1.1 equivalents) was added to the reaction mixture. To promote the condensation reaction, 14.0 mL of DIEA (0.080377 moles; 3.0 equivalents) was added to the reaction mixture and allowed to stir for 24 hours at room temperature under Ar(g). The reaction was followed by thin-layer chromatography by monitoring the consumption of reactants and production of product 3. Upon completion, the reaction mixture was concentrated under vacuum and product 3 was purified over silica employing a ethyl acetate (EtOAc) gradient with heptane. The purified mass of product 3 was 7.0 g, a yield of 44%.

**Boc-group Deprotection of Product 3:** A mass of 7.0 g of product 3 (0.011990 moles; 1.0 equivalents) was dissolved in dioxane. To this, 50 mL of 12.1 M concentration hydrochloric acid (HCl; 0.60500 moles; 50.1 equivalents) was added to the reaction mixture. The reaction was stirred for 2 hours at room temperature under Ar(g). Upon completion of the reaction a significant amount of product3 remained with respect to product 4. Therefore, the reaction mixture was concentrated and the reaction was repeated for 30 minutes to ensure complete conversion of product3 to product4. After near complete conversion was observed, the reaction was concentrated under vacuum and purified over silica employing a MeOH gradient with DCM. The final purified mass of product 4, the desired product, was 2.77 g, a yield of 60%. Complete <sup>1</sup>H-NMR, LC/MS and flow injection positive mode ESI-MS was performed to confirm the identity of the product.

**[0067]** In general the reaction scheme that can be employed is shown below. Here, the Fmoc-protect amino acid can be couple to any primary (or secondary amine) with any one of the various coupling agents to amidate the carboxylic acid. Following deprotection of the Fmoc-group with piperidine, the amine on the amino acid can be acetylated with any carboxylic acid employing any one of the plethora of coupling agents. Finally, deprotection of any side chain protection groups can be performed by utilizing a strong acid.

### Generalized Amino Acid Surfactant Reaction Scheme

**[0068]** As further illustrated in Figs. 1-3, the resulting purified product was measured using HPLC monitoring absorbance at 220nm wavelength, mass spectrometry, and proton NMR in D<sub>2</sub>O using a 400 MHz Bruker instrument with 16 scans and identified as [amino({[4-dodecanamido-4-(ethylcarbamoyl)butyl]amino})methylidene]azanium. Shown in Fig. 1 is the LC/MS of purified compound 9. (A) HPLC chromatogram monitoring absorbance at 220 nm wavelength. (B) The corresponding positive mode electrospray ionization mass spectrometry of the primary peak highlighted in the red dotted line box. The calculated m/z for the [M+H]<sup>+</sup> of compound 9 is calculated to be 384.58727. Shown in Fig. 2 is: (A) The chemical structure and corresponding [M+H]<sup>+</sup> m/z for compound 9. (B) Positive mode ESI-MS of compound 9 final product. Shown in Fig. 3 is: <sup>1</sup>H-NMR of compound 9 in D<sub>2</sub>O on 400 MHz Bruker instrument with 16 scans.

Reference Example 2: Dose response of reference compound 9 prevention of bacterial attachment

**[0069]** Compositions A-F comprising different concentrations of reference compound 9 in water are shown in Table 1.

**Table 1: Formulation compositions used in Example 2**

Composition	A	B	C	D	E	F
Reference Compound 9 (w/w %)	0.4	0.3	0.15	0.1	0.05	0.01
Purified Water (w/w %)	99.6	99.7	99.85	99.9	99.95	99.99

**[0070]** Initial studies evaluated the concentration effect of reference compound 9 in a simple water solution (Table 1 compositions) on prevention of bacterial attachment to pellicle coated HA pegs. Reference Compound 9 in water demonstrated a dose dependent response and the most effective concentration was identified to be 0.3 wt% (Table 2). However, 0.15 wt% reference compound 9 also demonstrated efficacy at preventing bacterial attachment and was evaluated at that concentration further to match the concentration of LAE in the current commercial product, Listerine Advanced Defense Gum Health (positive control).

**Table 2: Prevention assay efficacy results for compositions in Table 1**

Composition	A	B	C	D	E	F	Positive Control	Negative Control
Average Log RLU	3.44	3.25	4.86	5.59	5.52	5.95	4.09	6.20
Std Error	-	-	-	-	-	-	0.14	0.15

**Example 3: Reference Compound 9 prevents bacterial attachment equivalent to LAE**

**[0071]** The optimal concentration of reference compound 9 (0.15 wt %) was compared to the same concentration of LAE for prevention of bacterial attachment when formulated into a simple water or alcohol solution (Table 3).

**Table 3: Formulation compositions used in Example 3**

Compositions	G	H	I	J
Reference Compound 9 (w/w %)	0.00	0.15	0.00	0.15
LAE (w/w%)	0.15	0.00	0.15	0.00
Alcohol, 190 proof (w/w %)	18.2	18.2	0	0
Purified Water (w/w%)	81.65	81.65	99.85	99.85

**[0072]** Table 4 suggests that reference compound 9 (0.15 wt%) is equally as efficacious as LAE (0.15 wt%) at preventing bacterial attachment in both a 21.6% alcohol and water based solution. LAE concentration in Listerine Advanced Defense Gum Treatment (LAGDT) is 0.15 wt% which was the positive control with water as the negative control.

**Table 4. Comparison between LAE and reference compound 9 in the prevention of bacterial attachment**

Compositions	G	H	I	J	21.6% Alcohol Control	(Positive Control)	(Negative Control)
Average Log RLU	4.35	4.75	4.85	4.59	5.96	4.09	6.20
Std Error	-	-	0.26	0.47	-	0.14	0.15

**[0073]** **Example 4: Reference Compound 9 prevents bacterial attachment in full formula** Following confirmation that LAE prevents bacterial attachment to the same degree as LAE by the same mechanism of action, full formulas with reference compound 9 were optimized. Reference Compound 9 compositions K-R include 0.15 wt% reference compound 9 in alcohol free base (Table 5).

**Table 5: Formulation compositions used in example 3.**

Composition	K	L	M	N	O	P	Q	R

**[0074]** The results in Table 6 suggest that the presence of essential oils (EOs) has no effect on reference compound 9 (0.15 wt%) prevention of bacterial attachment. However, surfactant has a major effect with 0.645 wt% Mackam and no surfactant enabling the best prevention of attachment. LAE concentration in Listerine Advanced Defense Gum Treatment (LAGDT) is 0.15 wt% which is the positive control with water as the negative control.

## METHODS

## Formulation Preparation

**[0081]** The formulations in Examples 2-9 were prepared using conventional mixing technology. Briefly, benzoic acid and sodium benzoate were dissolved in propylene glycol or water. Flavor and essential oils were dissolved in propylene glycol or in surfactant and water (in some compositions no EOs or flavor were added). Sucralose was dissolved in water. Surfactant was dissolved/mixed into water. The sodium benzoate and benzoic acid containing solution was added to the mixing vessel followed by the essential oil and flavor solutions and then the surfactant solution and sorbitol. This was followed by addition of the solid compound. Sonication or increase in temperature may or may not be used to expedite the dissolution of the compounds. The pH of the formulations was adjusted to about pH 4.2 with sodium hydroxide or hydrochloric acid and then water added to q.s. the composition.

## Prevention Assay Method

**[0082]** The formulations in Examples 2-4, 6, 8 and 9 were prepared and test for prevention of bacterial attachment using the prevention assay. In this assay hydroxyapatite-coated polystyrene peg plate (96 pegs, N=8 per group) was exposed to saliva for one minute to form a pellicle at a temperature of 35C. Then, for each formulation, eight pegs (N=8) were pre-treated for ten minutes with the formulation using an orbital shaker set to 500RPM at room temperature. As a negative control, eight pegs (N=8) were pre-treated for ten minutes with sterile water. Next, a 16-hour salivary biofilm was grown on these polystyrene peg plates at a temperature of 35C.

**[0083]** After all treatments were complete, the biofilm from each peg was neutralized and rinsed. The biofilm was harvested via sonication using a Q-Sonica Q700 Ultrasonic Liquid Processor with 431MP4-00 microplate horn Damper and 0.5:1 reverse gain booster (Q-Sonica, Newtown, CT). Using a Celsis Rapid Detection RapiScreen kit (Celsis International PLC, Chicago, IL), the bacteria were lysed with Celsis Luminex and then the adenosine triphosphate (ATP) from the lysed bacteria was measured using the bioluminescence marker Celcis Luminate and a Centro LB 960 Microplate Luminometer supplied by Berthold Technologies (Wildbad, Germany). Data were reported in log RLU (relative light units) where decreasing log RLUs indicated fewer viable bacteria remained on the biofilm substrate. The log RLUs for the prevention assay are shown on Tables 2, 4, 6, 10, 14, and 16.

*S. Mutans* Single Species Kill Assay

**[0084]** The formulations listed in Example 7 were prepared and tested using an *in-vitro* single species *S. mutans* biofilm model. A 24-hour *S. mutans* biofilm is grown on a polystyrene peg plate (96 pegs, N=6 per test group). The pegs were subsequently treated for thirty seconds with each of formulations H and I, as well as positive and negative controls. The treatment is applied as a single thirty (30) second treatment. The positive control is a commercially available essential oil mouth rinse. The negative control is sterile water. After treatment the biofilm is neutralized and rinsed. The biofilm is harvested via sonication using a Misonix Ultrasonic Liquid Processor (Farmingdale, NY). Using a Celsis Rapid Detection RapiScreen kit (Celsis International PLC, Chicago), the bacteria are lysed with Celsis Luminex and then the adenosine triphosphate (ATP) from the lysed bacteria is measured using the bioluminescence marker LB960 Microplate Luminometer supplied by Berthold (Wildbad, Germany). Data are reported in log RLU (relative light units) where decreasing log RLUs indicates fewer viable bacteria remaining on the biofilm substrate.

## HPLC Quantification of Compounds

**[0085]** Briefly, formulations containing either LAE or any of the 26 compounds and standards are diluted into a solution of 50% acetonitrile and 50% water. They are evaluated on an Agilent HPLC using a Zorbax ion exchange column. In the method, 10uL of the sample is withdrawn and ran through the HPLC with a 40% potassium phosphate (molarity at pH 3.0) 60% acetonitrile mobile phase. Sample retention time varies between 4 and 12 minutes, depending upon the molecule. The molecule peak is auto-integrated using the Online Agilent HPLC software. Comparisons are made to the standard to identify the % of compound remaining following storage.

## METHODS

## Formulation Preparation

**[0086]** The formulations in Examples 2-9 were prepared using conventional mixing technology. Briefly, benzoic acid and sodium benzoate were dissolved in propylene glycol or water. Flavor and essential oils were dissolved in propylene

glycol or in surfactant and water (in some compositions no EOs or flavor were added). Sucralose was dissolved in water. Surfactant was dissolved/mixed into water. The sodium benzoate and benzoic acid containing solution was added to the mixing vessel followed by the essential oil and flavor solutions and then the surfactant solution and sorbitol. This was followed by addition of the solid compound. Sonication or increase in temperature may or may not be used to expedite the dissolution of the compounds. The pH of the formulations was adjusted to about pH 4.2 with sodium hydroxide or hydrochloric acid and then water added to q.s. the composition.

#### Prevention Assay Method

**[0087]** The formulations in Examples 2-4, 6, 8 and 9 were prepared and test for prevention of bacterial attachment using the prevention assay. In this assay hydroxyapatite-coated polystyrene peg plate (96 pegs, N=8 per group) was exposed to saliva for one minute to form a pellicle at a temperature of 35C. Then, for each formulation, eight pegs (N=8) were pre-treated for ten minutes with the formulation using an orbital shaker set to 500RPM at room temperature. As a negative control, eight pegs (N=8) were pre-treated for ten minutes with sterile water. Next, a 16-hour salivary biofilm was grown on these polystyrene peg plates at a temperature of 35C.

**[0088]** After all treatments were complete, the biofilm from each peg was neutralized and rinsed. The biofilm was harvested via sonication using a Q-Sonica Q700 Ultrasonic Liquid Processor with 431MP4-00 microplate horn Damper and 0.5:1 reverse gain booster (Q-Sonica, Newtown, CT). Using a Celsis Rapid Detection RapiScreen kit (Celsis International PLC, Chicago, IL), the bacteria were lysed with Celsis Luminex and then the adenosine triphosphate (ATP) from the lysed bacteria was measured using the bioluminescence marker Celcisluminate and a Centro LB 960 Microplate Luminometer supplied by Berthold Technologies (Wildbad, Germany). Data were reported in log RLU (relative light units) where decreasing log RLUs indicated fewer viable bacteria remained on the biofilm substrate. The log RLUs for the prevention assay are shown on Tables 2, 4, 6, 10, 14, and 16.

#### *S. Mutans* Single Species Kill Assay

**[0089]** The formulations listed in Example 7 were prepared and tested using an *in-vitro* single species *S. mutans* biofilm model. A 24-hour *S. mutans* biofilm is grown on a polystyrene peg plate (96 pegs, N=6 per test group). The pegs were subsequently treated for thirty seconds with each of formulations H and I, as well as positive and negative controls. The treatment is applied as a single thirty (30) second treatment. The positive control is a commercially available essential oil mouth rinse. The negative control is sterile water. After treatment the biofilm is neutralized and rinsed. The biofilm is harvested via sonication using a Misonix Ultrasonic Liquid Processor (Farmingdale, NY). Using a Celsis Rapid Detection RapiScreen kit (Celsis International PLC, Chicago), the bacteria are lysed with Celsis Luminex and then the adenosine triphosphate (ATP) from the lysed bacteria is measured using the bioluminescence marker LB960 Microplate Luminometer supplied by Berthold (Wildbad, Germany). Data are reported in log RLU (relative light units) where decreasing log RLUs indicates fewer viable bacteria remaining on the biofilm substrate.

#### HPLC Quantification of Compounds

**[0090]** Briefly, formulations containing either LAE or any of the 26 compounds and standards are diluted into a solution of 50% acetonitrile and 50% water. They are evaluated on an Agilent HPLC using a Zorbax ion exchange column. In the method, 10uL of the sample is withdrawn and ran through the HPLC with a 40% potassium phosphate (molarity at pH 3.0) 60% acetonitrile mobile phase. Sample retention time varies between 4 and 12 minutes, depending upon the molecule. The molecule peak is auto-integrated using the Online Agilent HPLC software. Comparisons are made to the standard to identify the % of compound remaining following storage.

#### Claims

1. A compound described by the Formula I:

(I)

wherein:

R<sub>1</sub> is a C<sub>7</sub>-C<sub>17</sub> alkyl group ;

R<sub>2</sub> is -NH<sub>2</sub>;

and salts thereof, said salts having an anion X<sup>-</sup> preferably selected from the group consisting of acetate, benzoate, besylate, bromide, chloride, chlorotheophyllinate, citrate, ethandisulfonate, fumarate, gluconate, hippurate, iodide, fluoride, lactate, laurylsulfate, malate, laeate, mesylate, methysulfate, napsylate, nitrate, octadecanoate, oxalate, pamoate, phosphate, polygalacturonate, succinate, sulfate, tartrate, and tosylate; n is from 1 to 3; and

R<sub>3</sub> is a linear or branched, saturated or unsaturated aliphatic group having from 1 to 6 carbon atoms.

2. The compound of claim 1 wherein R<sub>3</sub> is a C<sub>1</sub>-C<sub>6</sub> alkyl group

3. The compound of claim 1 having a formula selected from the group consisting of:

N-[4-amino-1-(ethylcarbamoyl)butyl]dodecanamide

N-[2-amino-1-(ethylcarbamoyl)ethyl]dodecanamide

N-(5-amino-1-(hexylamino)-1-oxopentan-2-yl)dodecanamide

4. The compound of claim 1 wherein R<sub>2</sub> is an amine group in its free base form (-NH<sub>2</sub>) or a salt thereof; and n is 1 or 3.

5. A compound described by the Formula I:

wherein:

15  $R_1$  is an alkyl group having 7 carbon atoms;

$R_2$  is  $-NH_2$ ;

and salts thereof, said salts having an anion  $X^-$  preferably selected from the group consisting of acetate, benzoate, besylate, bromide, chloride, chlorotheophyllinate, citrate, ethandisulfonate, fumarate, gluconate, hippurate, iodide, fluoride, lactate, laurylsulfate, malate, laeate, mesylate, methysulfate, napsylate, nitrate, octadecanoate, oxalate, pamoate, phosphate, polygalacturonate, succinate, sulfate, tartrate, and tosylate;

20  $n$  is 3; and

$R_3$  is a linear or branched, saturated or unsaturated aliphatic group having a carbon chain length of 1 to 11 carbon atoms.

6. The compound of claim 5 wherein  $R_1$  is an alkyl group having 7 carbon atoms and  $R_3$  is an alkyl group having a carbon chain length of 8 to 11 carbon atoms.
7. The compound of claim 6, having a formula selected from the group consisting of:

*N*-(5-amino-1-oxo-1-(undecylamino)pentan-2-yl)octanamide  
and

*N*-(5-amino-1-(octylamino)-1-oxopentan-2-yl)octanamide

8. A compound described by the formula I:

(I)

wherein:

R<sub>1</sub> is an alkyl group having 11 carbon atoms;

R<sub>2</sub> is -NH<sub>2</sub>;

and salts thereof, said salts having an anion X<sup>-</sup> preferably selected from the group consisting of acetate, benzoate, besylate, bromide, chloride, chlorotheophyllinate, citrate, ethandisulfonate, fumarate, gluconate, hippurate, iodide, fluoride, lactate, laurylsulfate, malate, laeate, mesylate, methysulfate, napsylate, nitrate, octadecanoate, oxalate, pamoate, phosphate, polygalacturonate, succinate, sulfate, tartrate, and tosylate;

n is 3; and

R<sub>3</sub> is a linear or branched, saturated or unsaturated aliphatic group having a carbon chain length of 1 to 11 carbon atoms.

9. The compound of claim 8 wherein R<sub>1</sub> is an alkyl group having 11 carbon atoms and R<sub>3</sub> is an alkyl group having a carbon chain length of 2 to 6 carbon atoms.
10. A composition comprising a compound of any of claims 1-9 and a vehicle wherein said composition is in a form selected from the group consisting of a mouthwash, mouth rinse, mouth spray, toothpaste, tooth gel, sub-gingival gel, mousse, foam, denture care product, dentifrice, lozenge, and chewable tablet.
11. The composition of claim 10 wherein said composition is a mouthwash comprising a compound of claim 3; a carrier comprising water; and at least one surfactant selected from the group consisting of anionic, non-ionic, betaine surfactants and combinations of two or more thereof.
12. The composition of claim 11 further comprising at least one essential oil selected from the group consisting of menthol, thymol, eucalyptol, methyl salicylate, and combinations of two or more thereof.
13. A compound according to any of claims 5-9, for use in a method of inhibiting plaque in the oral cavity comprising contacting a surface of the oral cavity with the compound.

## Patentansprüche

1. Verbindung, die durch die Formel I beschrieben wird:

(I)

wobei:

R<sub>1</sub> eine C<sub>7</sub>- bis C<sub>17</sub>-Alkylgruppe ist;

R<sub>2</sub> -NH<sub>2</sub> ist,

und Salze davon, wobei die Salze ein Anion X<sup>-</sup> aufweisen, das vorzugsweise ausgewählt ist aus der Gruppe bestehend aus Acetat, Benzoat, Besylat, Bromid, Chlorid, Chlortheophyllinat, Citrat, Ethandisulfonat, Fumarat, Gluconat, Hippurat, Iodid, Fluorid, Lactat, Laurylsulfat, Malat, Laeat, Mesylat, Methylsulfat, Napsylat, Nitrat,

Octadecanoat, Oxalat, Pamoat, Phosphat, Polygalacturonat, Succinat, Sulfat, Tartrat und Tosylat;  
n 1 bis 3 ist; und

R<sub>3</sub> eine lineare oder verzweigte, gesättigte oder ungesättigte aliphatische Gruppe mit 1 bis 6 Kohlenstoffatomen ist.

2. Verbindung nach Anspruch 1, wobei R<sub>3</sub> eine C<sub>1</sub>-C<sub>6</sub>-Alkylgruppe ist.

3. Verbindung nach Anspruch 1 mit einer Formel aus der Gruppe bestehend aus:

N-[4-Amino-1-(ethylcarbamoyl)butyl]dodecanamid

N-[2-Amino-1-(ethylcarbamoyl)ethyl]dodecanamid

N-(5-Amino-1-(hexylamino)-1-oxopentan-2-yl)dodecanamid.

4. Verbindung nach Anspruch 1, wobei R<sub>2</sub> eine Amingruppe in ihrer freien Basenform (-NH<sub>2</sub>) oder ein Salz davon ist und n 1 oder 3 ist.

5. Verbindung, die durch die Formel I beschrieben wird:

(I)

wobei:

R<sub>1</sub> eine Alkylgruppe mit 7 Kohlenstoffatomen ist;

R<sub>2</sub> -NH<sub>2</sub> ist,

und Salze davon, wobei die Salze ein Anion X<sup>-</sup> aufweisen, das vorzugsweise ausgewählt ist aus der Gruppe bestehend aus Acetat, Benzoat, Besylat, Bromid, Chlorid, Chlorthephyllinat, Citrat, Ethandisulfonat, Fumarat, Gluconat, Hippurat, Iodid, Fluorid, Lactat, Laurylsulfat, Malat, Laeat, Mesylat, Methylsulfat, Napsylat, Nitrat,

Octadecanoat, Oxalat, Pamoat, Phosphat, Polygalacturonat, Succinat, Sulfat, Tartrat und Tosylat;  
n 3 ist; und

R<sub>3</sub> eine lineare oder verzweigte, gesättigte oder ungesättigte aliphatische Gruppe mit einer Kohlenstoffkettenlänge von 1 bis 11 Kohlenstoffatomen ist.

6. Verbindung nach Anspruch 5, wobei R<sub>1</sub> eine Alkylgruppe mit 7 Kohlenstoffatomen ist und R<sub>3</sub> eine Alkylgruppe mit einer Kohlenstoffkettenlänge von 8 bis 11 Kohlenstoffatomen ist.

7. Verbindung nach Anspruch 6 mit einer Formel aus der Gruppe bestehend aus:

*N*-(5-Amino-1-oxo-1-(undecylamino)pentan-2-yl)octanamid  
und

*N*-(5-Amino-1-(octylamino)-1-oxopentan-2-yl)octanamid.

8. Verbindung, die durch die Formel I beschrieben wird:

(I)

wobei:

R<sub>1</sub> eine Alkylgruppe mit 11 Kohlenstoffatomen ist;

R<sub>2</sub>-NH<sub>2</sub> ist,

und Salze davon, wobei die Salze ein Anion X<sup>-</sup> aufweisen, das vorzugsweise ausgewählt ist aus der Gruppe bestehend aus Acetat, Benzoat, Besylat, Bromid, Chlorid, Chlortheophyllinat, Citrat, Ethandisulfonat, Fumarat, Gluconat, Hippurat, Iodid, Fluorid, Lactat, Laurylsulfat, Malat, Laeat, Mesylat, Methylsulfat, Napsylat, Nitrat, Octadecanoat, Oxalat, Pamoat, Phosphat, Polygalacturonat, Succinat, Sulfat, Tartrat und Tosylat;

n 3 ist; und

R<sub>3</sub> eine lineare oder verzweigte, gesättigte oder ungesättigte aliphatische Gruppe mit einer Kohlenstoffkettenlänge von 1 bis 11 Kohlenstoffatomen ist.

9. Verbindung nach Anspruch 8, wobei R<sub>1</sub> eine Alkylgruppe mit 11 Kohlenstoffatomen ist und R<sub>3</sub> eine Alkylgruppe mit einer Kohlenstoffkettenlänge von 2 bis 6 Kohlenstoffatomen ist.

10. Zusammensetzung, die eine Verbindung nach einem der Ansprüche 1-9 und ein Vehikel umfasst, wobei die Zu-

sammensetzung in einer Form aus der Gruppe bestehend aus einer Mundspülung, Mundspüllösung, eines Mundsprays, einer Zahnpasta, eines Zahngels, Subgingivalgels, einer Mousse, eines Schaums, eines Zahnersatzpflegeprodukts, eines Zahnputzmittels, einer Lutschtablette und einer Kautablette vorliegt.

11. Zusammensetzung nach Anspruch 10, wobei es sich bei der Zusammensetzung um eine Mundspülung handelt, die eine Verbindung nach Anspruch 3, einen Träger, der Wasser umfasst, und mindestens ein Tensid aus der Gruppe bestehend aus anionischen Tensiden, nichtionischen Tensiden, Betaintensiden und Kombinationen von zwei oder mehr davon umfasst.
12. Zusammensetzung nach Anspruch 11, ferner umfassend mindestens ein etherisches Öl aus der Gruppe bestehend aus Menthol, Thymol, Eucalyptol, Methylsalicylat und Kombinationen von zwei oder mehr davon.
13. Verbindung nach einem der Ansprüche 5-9 zur Verwendung bei einem Verfahren zum Hemmen von Plaque in der Mundhöhle, bei dem man eine Oberfläche der Mundhöhle mit der Verbindung in Kontakt bringt.

## Revendications

1. Composé décrit par la formule I :

dans lequel :

$R_1$  est un groupe alkyle en  $C_7-C_{17}$  ;

$R_2$  est

$-NH_2$ ,

et des sels de celui-ci, lesdits sels possédant un anion  $X^-$  de préférence sélectionné dans le groupe constitué par l'acétate, le benzoate, le bésylate, le bromure, le chlorure, le chlorothéophyllinate, le citrate, l'éthanedisulfonate, le fumarate, le gluconate, l'hippurate, l'iodure, le fluorure, le lactate, le laurylsulfate, le malate, le laéate, le mésylate, le méthylsulfate, le napsylate, le nitrate, l'octadécanoate, l'oxalate, le pamoate, le phosphate, le polygalacturonate, le succinate, le sulfate, le tartrate et le tosylate ;

$n$  vaut de 1 à 3 ; et

$R_3$  est un groupe aliphatique linéaire ou ramifié, saturé ou insaturé comportant de 1 à 6 atomes de carbone.

2. Composé selon la revendication 1 dans lequel  $R_3$  est un groupe alkyle en  $C_1-C_6$ .

3. Composé selon la revendication 1 possédant une formule choisie dans le groupe constitué par :

N-[4-amino-1-(éthylcarbamoyl)butyl]dodécaneamide

N-[2-amino-1-(éthylcarbamoyl)éthyl]dodecanamide

N-(5-amino-1-(hexylamino)-1-oxopentan-2-yl)dodécanamide

4. Composé selon la revendication 1 dans lequel  $R_2$  est un groupe amine dans sa forme de base libre ( $-NH_2$ ) ou un sel de celui-ci ; et n vaut 1 ou 3.

5. Composé décrit par la formule I :

dans lequel :

$R_1$  est un groupe alkyle comportant 7 atomes de carbone ;

$R_2$  est

$-NH_2$ ,

et des sels de celui-ci, lesdits sels possédant un anion  $X^-$  de préférence sélectionné dans le groupe constitué par l'acétate, le benzoate, le bésylate, le bromure, le chlorure, le chlorothéophyllinate, le citrate, l'éthanedisulfonate, le fumarate, le gluconate, l'hippurate, l'iodure, le fluorure, le lactate, le laurylsulfate, le malate, le laéate, le mésylate, le méthylsulfate, le napsylate, le nitrate, l'octadécanoate, l'oxalate, le pamoate, le phosphate, le polygalacturonate, le succinate, le sulfate, le tartrate et le tosylate ;

n vaut 3 ; et

$R_3$  est un groupe aliphatique linéaire ou ramifié, saturé ou insaturé ayant une longueur de chaîne carbonée de 1 à 11 atomes de carbone.

6. Composé selon la revendication 5 dans lequel  $R_1$  est un groupe alkyle comportant 7 atomes de carbone et  $R_3$  est un groupe alkyle ayant une longueur de chaîne carbonée de 8 à 11 atomes de carbone.

7. Composé selon la revendication 6, possédant une formule choisie dans le groupe constitué par :

N-(5-amino-1-oxo-1-(undécylamino)pentan-2-yl)octanamide et

N-(5-amino-1-(octylamino)-1-oxopentan-2-yl)octanamide

8. Composé décrit par la formule I :

(I)

dans lequel :

R<sub>1</sub> est un groupe alkyle comportant 11 atomes de carbone ;

R<sub>2</sub> est

-NH<sub>2</sub> ;

et des sels de celui-ci, lesdits sels possédant un anion X<sup>-</sup> de préférence sélectionné dans le groupe constitué par l'acétate, le benzoate, le bésylate, le bromure, le chlorure, le chlorothéophyllinate, le citrate, l'éthanedisulfonate, le fumarate, le gluconate, l'hippurate, l'iodure, le fluorure, le lactate, le laurylsulfate, le malate, le laéate, le mésylate, le méthylsulfate, le napsylate, le nitrate, l'octadécanoate, l'oxalate, le pamoate, le phosphate, le polygalacturonate, le succinate, le sulfate, le tartrate et le tosylate ;

n vaut 3 ; et

R<sub>3</sub> est un groupe aliphatique linéaire ou ramifié, saturé ou insaturé, ayant une longueur de chaîne carbonée de 1 à 11 atomes de carbone.

9. Composé selon la revendication 8 dans lequel R<sub>1</sub> est un groupe alkyle comportant 11 atomes de carbone et R<sub>3</sub> est un groupe alkyle ayant une longueur de chaîne carbonée de 2 à 6 atomes de carbone.

10. Composition comprenant un composé selon les revendications 1 à 9 et un véhicule, ladite composition étant dans une forme sélectionnée dans le groupe consistant en bain de bouche, rinçage de bouche, pulvérisation buccale, dentifrice, gel dentaire, gel subgingival, mousse, produit de soins pour dentier, pastille et comprimé à mâcher.

11. Composition selon la revendication 10, ladite composition étant un bain de bouche comprenant un composé selon la revendication 3 ; un véhicule comprenant de l'eau ; et au moins un agent tensioactif choisi dans le groupe constitué par des agents tensioactifs à base de bétaine anioniques, non ioniques, et des combinaisons de deux ou plusieurs de ceux-ci.

12. Composition selon la revendication 11 comprenant en outre au moins une huile essentielle choisie dans le groupe constitué par le menthol, le thymol, l'eucalyptol, le salicylate de méthyle et des combinaisons de deux ou plusieurs de ceux-ci.

13. Composé selon l'une quelconque des revendications 5 à 9, destiné à être utilisé dans un procédé d'inhibition de la plaque dentaire dans la cavité buccale comprenant la mise en contact d'une surface de la cavité buccale avec le composé.
