(54) **COMPOSITE BODY**

(57) An object is to provide a composite body with which a molded article having both excellent metallic luster and light-transmitting properties can be produced.

A composite body including: a metal foil having a plurality of through-holes in the thickness direction; and

a colored layer provided on at least one surface side of the metal foil, in which an average opening diameter of the through-holes is 0.1 to 100 μm , an average opening ratio provided by the through-holes is 0.1% to 90%, and a light transmittance of the colored layer is 5% or higher.

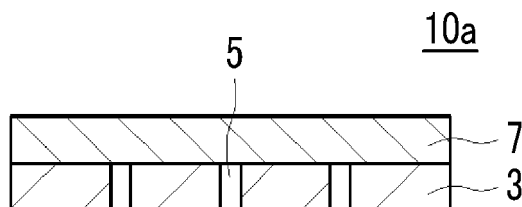

FIG. 3
