(54) **DIAGNOSTIC DEVICE**

(57) The present disclosure relates to a diagnostic device using a test kit including a specimen plate having a specimen region in which a specimen is smeared and a patch plate configured to store a contact-type staining patch, which comes into contact with the specimen to stain the specimen, the diagnostic device comprising a moving unit configured to move a structure of the test kit, wherein the moving unit transmits power to one or more of the specimen plate and the patch plate through a power transmission member, and moves the specimen plate

and the patch plate relative to each other such that a smearing unit of the patch plate moves in one direction along a longitudinal direction of the test kit so that the specimen is smeared in the specimen region.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 24 18 0166

5

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
