PERSONAL WALLET

- (57)

The purpose of this invention is a personal wallet for carrying electronic devices. It can carry an electronic device like a smartphone or similar inside it, as well as items such as cards. It includes a compartment designed for coins or other items like USB memory sticks. The
- personal wallet can be set up as "stand" that positions the electronic device at an angle. On the other hand, the personal wallet includes an element or is made from a material that protects the items inside it from RFID (radio frequency identification) radio waves.

FIG. 2

Description

PURPOSE OF THE INVENTION

[0001] As the name states, the purpose of this invention is a personal wallet that makes it possible to carry electronic devices. This is an invention which, considering the current state of the art, offers unprecedented advantages.

FIELD OF THE INVENTION

[0002] Thus, this invention falls within the field of accessories such as wallets and cases for personal use, as well as for carrying electronic devices.

BACKGROUND OF THE INVENTION

[0003] A personal wallet, where users keep their personal documents and valuables such as money as well as mobile devices such as smartphones, are practically essential in today's world. And carrying them is becoming increasingly complicated since users need to carry multiple items with them.

[0004] In reference to the current state of the art, it is important to note that, although there are several case and wallet designs in existence, there are no known types with the same or similar structural and constitutive technical characteristics as the invention described here.

SUMMARY OF THE INVENTION

[0005] The purpose of the invention is a personal wallet, capable of carrying an electronic device like a smartphone or similar inside it, as well as items such as cards, and includes a compartment designed for coins or other items like USB memory sticks.

[0006] The personal wallet can be set up as "stand" that positions the electronic device at an angle, providing a more comfortable reading and watching experience for users.

[0007] On the other hand, the personal wallet either includes an element or is made from a material that protects the items inside it from RFID (radio frequency identification) radio waves.

[0008] Unless defined otherwise, all technical and scientific terms used herein have the same meaning as commonly understood by one of ordinary skill in the art to which this invention belongs. Any methods, techniques, devices, or materials similar or equivalent to those described herein may be used in the practice or testing of the present invention.

BRIEF DESCRIPTION OF DRAWINGS

[0009] To complete the description given and provide a better understanding of the characteristics of the invention, this description is supplemented with figures that

are illustrative but not limited to the following:

Figure 1 is a perspective drawing of the personal wallet open 90°.

Figure 2 is a perspective drawing of the personal wallet open 160°.

Figure 3 is a perspective drawing of the personal wallet in its "stand" configuration.

PREFERRED EMBODIMENTS OF THE INVENTION

[0010] In view of the figures, the following is a non-limiting preferred embodiment of the proposed invention, which involves a personal wallet.

[0011] As shown in the figures, the personal wallet comprises a body (1) designed to be opened, the interior of which includes fasteners (2) designed for an electronic device (3), as well as a compartment (4) designed to contain coins or other items and a compartment (5) designed to contain items like cards.

[0012] The outside perimeter of the body (1) includes a closure (6) designed to allow users to open and close the wallet (1).

[0013] Additionally, the unit (1) comprises or is made of an RFID insulating material designed to protect the items inside it from radio waves.

[0014] Moreover, both the body (1) and the fasteners (2) are designed to be arranged in a "stand" configuration in which the electronic device (3) is positioned at an angle to provide a more comfortable way for users to read and watch the device (3).

[0015] Having sufficiently described the nature of this invention, as well as the manner of putting it into practice, it is not considered necessary to further explain it so that any person skilled in the art may understand its scope and the advantages it offers, although it should be noted that, provided its essential nature is respected, other embodiments may be developed which differ in detail from the one described by way of example, and to which the protection claimed will also apply provided the fundamental principle is not altered, changed or modified.

Claims

1. Personal wallet, distinguished by the fact that it includes a body (1) designed to be opened, the interior of which includes fasteners (2) for an electronic device (3), as well as a compartment (4) designed to contain coins or other items and a compartment (5) designed to contain items like cards, and both the body (1) and the fasteners (2) are designed to be arranged in a "stand" configuration.
2. Personal wallet, according to the preceding claim, distinguished by the fact that the outside perimeter

of the body (1) includes a closure (6) designed to allow users to open and close the wallet (1).

3. Personal wallet, according to any of the preceding claims, distinguished by the fact that the unit (1) comprises or is made of an RFID insulating material designed to protect the items inside it from the radio waves.
